This Meeting was concurrent with the Conservation Commission's meeting. Each Board/Commission held its own hearing concurrently.

Call to Order:
The meeting was called to order by John Rogers of the Westwood Conservation Commission and Acting Planning Board Chair David Atkins at approximately 7:06 p.m. The meeting was video recorded by Westwood Media Center.

Present:
Planning Board members present: Acting Chair, David L. Atkins, Jr., Steven H. Olanoff, Michael L. McCusker and Brian D. Gorman. Staff members present: Abigail McCabe, Town Planner, Nora Loughnane, Community & Economic Development Director and Jessica Cole who recorded the meeting minutes. The Westwood Conservation Commission members and Conservation Agent, Karon Skinner Catrone were also present. Trevor Laubenstein was not present.

266-278, 277A, 277-283, 280, 288, 291-295 Washington St., 9 School St., East St. Islington Center Redevelopment - Special Permit Public Hearing continued from 1/16, 2/13, 2/27, 3/20 - Request for FMUOD* Special Permit, Earth Material Movement, and EIDR* proposal for new mixed use building for first floor commercial with two floors of 18 condominium residences and underground parking at 288 Washington, to renovate building at 266-278 Washington St. for retail and childcare uses, relocate, expand and renovate branch library (Wentworth Hall) to 277-283 Washington, new retail pharmacy (CVS) building at 9 School St., parking, landscaping and associated site improvements.

Chairman Atkins re-opened the public hearing and noted that tonight’s hearing will be to take in new and final information and at the end of this evening's hearing, the Planning Board will make a motion to further continue the hearing to Tuesday, April 10, 2018 where the Planning Board will begin to deliberate, review the findings of fact, and likely vote.

Applicant Presentation:
Peter Zahka, attorney for applicant, Petruzziello Properties, gave an update on changes that have happened most notably the CVS is now 9,990 square feet without a drive-thru and the building has been relocated to be out of the 35 ft. wetland’s buffer so the buffer now only includes paving, parking, curbing and the dumpsters.

Sue Harrington, project engineer from GCG Associates, gave an overview of the project. The project proposes adding a fence and trees to improve the buffer, will use cut and dab method
remediation plan to remove invasive species to replace with wetland plant species. An underground infiltration system is proposed for the stormwater system. Presently there is no organized drainage on the East Street side. The fire truck and delivery truck turning movements were reviewed including Westwood Ladder One, which is the biggest truck in town. It has been approved by the Fire Department. The CVS delivery truck is 55 feet long, and can back into the loading zone via School Street; the delivery truck will come into the CVS site by taking a left onto School Street and right into the site to access the designated loading area. CVS will have one major delivery per week at off peak hours and daily deliveries will be with a smaller truck also during off-peak hours. She explained that delivery trucks will not come from Pine Lane/School Street neighborhood.

Ken Cram, project traffic engineer of Bayside Engineering, reported that he submitted an updated traffic study and responses on March 28 that included three options for signal timing and changes.

Michael McKay, project architect of McKay Architects, summarized the design plans that have been updated to add four trees along CVS and School Street, the smaller CVS building, and the spire has been moved toward the front of the building about eight feet to be in a similar location for where it is today.

Planning Board’s Peer Reviewer consultant comments:
Phil Paradis, of BETA Group, summarized his review comments and explained that the major changes were related to relocating the parking and the pavement and parking area was moved 18 ft. further form the wetland and closer to Washington Street, which is an improvement to the wetlands and the buffer zone. As proposed the stormwater system is designed to handle the ten year storm event, there are no new untreated outfalls, there is a recharge area, recharge is into the system, and 80% TSS removal or greater. Phil recommends adding a map and inspection form into the draft O&M (Operation and Maintenance Plan). Mike Sinesi, the Planning Board’s peer review architect from DSK indicated that all his comments have been incorporated into the revised plans.

Staff Comments:
Ms. McCabe, Town Planner, reported that the memo from Fire Chief approving the revised layout was included in the Board’s packet, Dedham Westwood Water District has reviewed and approved the revised utility plan, and Islington Center Task Force met last night on April 3 and voted to recommend favorable action by the Planning Bard on this project with a recommendation for no right turns onto School Street from the CVS and speed bumps to help eliminate cut thru traffic in the parking lot.

Board Questions/Comments:
What kind of water is going in/out of the wetlands?
  ● An intermittent stream, replaced it with mostly pavement with an overflow. 10 inch clay pipe into a catch basin on School Street.
Replacing the pipe?
● Not proposing to replace the pipe.  
When will water ever flow out of the pipe?  
  ● In any storm event, it’s a depression for the whole area.  
What plants are currently there?  
  ● Invasive species, highly degraded wetland, a mess with invasive species, a lot of trash, not much good plant species. The plan would be an improvement.
Landscaping plan for CVS parking lot? Buffer zone?  
  ● Red maples  
Does this meet all bylaws?  
  ● It does meet all standards  
Looked at it based on a bigger footprint?  
  ● Yes  
Infiltration basin?  
  ● Takes most of the roof as well as the driveway  
Currently no drainage that goes to East Street?  
  ● 2 catch basins that are too small to be effective.  
Substantial improvement, a positive. A request was made to replace Ginkgo Trees with native plants. Tremendous improvement in the CVS area.  
Worried about snow removal.  
  ● Current conditions, there is not much of a place for snow storage. Looking into it. We are adding as much buffer as we can. Snow will most likely go into a grassy area where plants will be salt resistant. Excellent suggestions, and will provide answers soon. The existing easements for driveway and access for Stafford Place will remain in place and this should be noted on the plan.  
Prevent tracking of mud in the construction site.

Chairman Atkins and Chairman Rogers opened the hearing to public comments and questions.

Public Comments:  
J. Burton, 14-16 Strafford Place – Expressed concern about flooding, snow removal and snow stored against the fence that may cause damage.

The Applicant responded that the drainage is being improved with this project with underground infiltration and new catch basins designed to handle the 10 year storm event. New granite curbing is proposed adjacent to the new 8 ft. fence abutting the Stafford Place/East Street abutters where no curb exists today.

J. Previtera, 16 Dean Street – Commented about snow storage and snow removal procedures and requested it be carefully reviewed. He also asked about the height of the retaining wall along the municipal lot.

Ms. Harrington replied that there is a 2-4% slope, back corner, graded up to the wall, and that the retaining wall is proposed to be 5-7 feet high along the municipal lot, and screening trees are proposed.
R. Jackman, 263 Washington Avenue - Asked about the view from his property.

Mr. Petruzziello responded that a new eight foot high fence and plantings for screening are proposed adjacent to his property.

Board and Staff Comments:
- Discussed the angle of the crosswalk in the CVS parking lot between landscaping parking islands and the transition from the crosswalk, the accessible ramp, and the landscaping in the island. Ms. Harrington commented: Instead the crosswalk will go from island to island, and we separated it from town property to applicant’s property.
- WCC suggested it stay straight, it is a safety concern.
- Planted island? Yes, we can add that.
- Catch basins, are they all being replaced with new? Yes, all will have the four inch sump.
- Curbing, vertical granite throughout? Yes, granite curbing throughout except in the area adjacent to the CVS parking spaces against the building will be flush with bollards and a curb stop at the head of each parking spaces.
- Construction exits, will there be certain ones? Designated one exit for each site. Yes. Ms. McCabe will add this as a condition in any approvals.
- Truck turns? Yes, they need to go to the other side of the street, but deliveries will be done at off hours. Daily deliveries will be in a smaller truck.
- What is the salting plan? Will be addressed with the snow storage and the Conservation Commission. Snow removal more detail in the O&M Plan.
- Structure of the columns? Mr. McKay replied: It will be the same pavement. We did redesign the columns, paving will all be the same.
- Underground parking, provide signs? Yes. Planning Board requested details on the parking garage entrance/exist ramp and the sidewalk crossing it, including the pedestrian signage.
- Requested all parking spaces remain open for shared use.

Action Taken:
Upon a motion made by Mr. Olanoff, seconded by Mr. McCusker, the Board voted 4-0 to continue the hearing to Tuesday April 10, at 7 pm at the Downey School Cafeteria.

Mr. Atkins requested all new material and information to be submitted by Friday. Ms. McCabe will put together a draft list of findings and conditions for the Board’s review in advance of the Tuesday’s hearing.

The Westwood Conservation Commission closed their hearing and a motion was made and seconded and all were in favor.

**Continued Public Hearing for Zoning Amendments for Annual Town Meeting** Two zoning articles related to the Islington Center Redevelopment Project: zoning map amendment to
expand LBB and FMUID6 district boundary and amend Section 9.5 to allow retail sales 10,000-15,000 sq. ft. in FMUID6 by special permit.

Upon a motion made by Mr. Olanoff, seconded by Mr. Gorman, the Planning Board voted 4-0 to withdraw Article 2 relative to the size or retail establishments.

On a motion made by Mr. Olanoff, seconded by Mr. McCusker, the Board voted 4-0 to continue the hearing to April 10, 2018 at 7:00 pm at the Downey School Cafeteria.

**1561 High Street, Reynold's Farm Senior Residential Development**  - Discussion Item relative to outstanding items, site work, construction schedule, and discussion of changes to approved plans.

Board Comments with Westwood Conservation Commission:  Project 4-5 years ago, watching to see when items will get finished with the Order of Conditions.

Applicant:
John Glossa, project engineer of Glossa Engineering, explained that he has created a punch list of unfinished items. Drainage calculations were not quite right. Catch basin grid, which you don’t really want going into the infiltration basin. Illumination of the baby pool will not affect the drainage, it has no benefit at all. He discussed the changes to the plan to eliminate the baby pool, eliminate grass in the turn-around at the end of the driveway, extend the retaining wall; connect downspouts to the underground chambers/ and install gravel path to the outlet structure.

Board and Staff Comments:
Ms. McCabe stated any changes to the Planning Board’s approved plans need to go back to the Planning Board for a public hearing with notification for a formal review. A continuation from the November meeting with Mr. Musto. This was a special permit and there was not specific end date or date for which the landscaping and site work had to be completed.

Applicant:  Baby pool has no use, or needed. The function of the pool has no benefit, more of a disadvantage. Attractive Landscaping may be better. The pool is 2.5 feet deep. It is cutting into a hill. It’s a maintenance problem we want the infiltration basin to last. The pipe is installed.

The Conservation Commission's Order of Conditions is now expired and the landscaping and drainage is incomplete.

A Planning Board member commented that he would like to see the landscaping in the turn-around remain as that is a common requirement. Ms. Loughnane added that the turnaround area was approved with the required size and landscaping by the Planning Board and the Fire Chief at the time the special permit was approved.
The Conservation Commission discussed an agreement that would allow the work to be completed by June and the grass to be reviewed in September to make sure it has grown in. A site visit of Saturday morning was discussed.

All units are sold except one left, the Town has stopped all permits and interior building inspections, until the exterior is complete. The site work, drainage and landscaping need to be done. Residents are concerned too. Ms. Loughnane does not want any agreements to be signed tonight because it should be carefully reviewed by Town Counsel.

Ms. Loughnane explained that the Town, through the Conservation Agent, has begun fining the owner the #300 per day beginning on April 1, 2018.

Public Comments:
S. Hoban/Greenlee, 1581 High Street – Presented photos she took since November 2017 construction has been going on since July 2012. Landscaping not completed, trees that were planted have died, flooding, work done in a timely fashion.

Ms. Loughnane explained that the special permit does not have a time frame when it has to be completed, special permit must begin construction within two years and do not expire once construction has commenced. The Conservation Commission’s Order of Conditions expired in June. Fines started on April 1st, $300/day under bylaw, the Public Works Department can review the work in the Town’s right-of-way, which is High Street and not the private driveway. The development is all on private land and Reynold’s Farm Way is not considered a public road and the Town therefore does not have authority over private land.

M. Keohane, #41 Reynolds Farm – Reiterated his concerns and complaints that there is no screening, landscaping, trees dying, flooding, and unfinished construction. He is looking for the board/commission and town for help.

K. Mellor, #41 Reynolds Farm – Reiterated resident concerns that the work is unfinished and the work that has been done is not done properly and not functioning as designed.

Unknown identified resident – Expressed concern for water damage and constant flooding not road, site, and houses.

Other Business:
Subcommittee for 215 High Street affordable housing component, they are looking for more feedback and guidance as they are moving further along. Ms. Loughnane explained that the zoning requires three affordable housing units on the property unless the Planning Board permits the units somewhere else after finding the proposal meets the Town’s housing needs. Acting Chair Atkins chose Mr. McCusker and himself as a subcommittee to review 215 High Street concept proposal further.

Approval of Minutes: No minutes were approved.
Annual Town Meeting – Ms. McCabe informed the Board of the new date for Town Meeting on Wednesday May 30, 2018 at Westwood High School Gymnasium.

Adjourn:
Upon a motion by Mr. McCusker and seconded by Mr. Gorman, the Board voted 4-0 in favor to adjourn the meeting at approximately 10:53 pm.
